

BHD8

One Shot Self-Contained Solution

BHD8 sleeve with initiator wire to the side

BHD8 is a turnkey, self-contained deflagration system consisting of a deflagration sleeve, stand and initiator that can be used to neutralise landmines and other thin cased unexploded ordnance (4mm steel maximum).

The integrated starter can be initiated using a 350v 6J exploder and when fired will lance through 4mm of mild steel in 1 second.

ADVANTAGES

- BHD8 is classified as a flammable solid and complies to UN3178 Hazardous Class 4.1, UN Packing Group III – Flammable Solid Inorganic N.O.S.
- The BHD8 Deflagration Sleeves are packed and shipped with operational stands in a disposable cardboard container. A standard supply pack consists of, 18 BHD8, 18 Wire Stands, together with operating instructions.
